

## Testimonials

I just wanted to simply let you know that I received a sample of your Mouth Watchers toothbrush and truly loved it. I found the bristles to be so kind to the soft tissue and felt the level of cleanliness the brush allowed was superior to any other brush I have used in the past. This brush makes you look forward to brushing! I am also happy to hear that you have a youth brush. Best wishes and keep up the great work!

I try many new products and it takes a lot to impress me. The Mouth Watchers toothbrush made such a significant impression on me that I am writing this testimonial. This brush is very gentle on the gums while at the same time it feels like it is effectively removing plaque! Your mouth feels very clean after you use it. I love knowing that the germs from the last brushing cannot survive on my toothbrush. It is like using a new toothbrush each time!

# ANTIBACTERIAL TOOTHBRUSH

WITH FLOSSING BRISTLES™  
FOR COMPLETE CLEANING

A Better Toothbrush For Better Health

# A Better Toothbrush For Better Health

## A Single Toothbrush Is Home To Millions Of Harmful Microorganisms

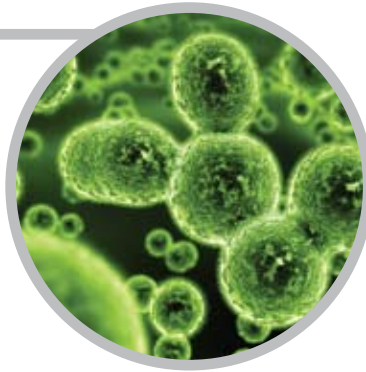

Bacteria thrives on a toothbrush after use. In a warm, moist environment of an average bathroom, bacteria on your toothbrush can double every 20 minutes resulting in as many as 100 million microorganisms on your toothbrush!

This bacteria can lead to illness, cavities and gum disease. USA Today Health Review reported that "The most serious threat to your everyday health may be hanging in plain sight in your bathroom."

## Clinically Proven To Eliminate 99.9% Of Bacteria

Our innovative antibacterial bristles eliminate 99.9% of bacteria build up on the toothbrush. Using patented technology, nano-silver suppresses a bacteria cell's respiration and metabolism, thus inhibiting cell growth that normally causes infection, odor, illness, etc.

The Mouth Watchers Antibacterial Toothbrush was tested at two independent laboratories and proven to eliminate 99.9% of bacteria within 6 hours.

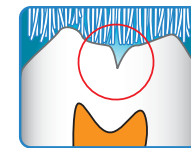

## Flossing Bristles™ Provide Superior Cleaning

With its revolutionary bristle design, the Mouth Watchers Antibacterial Toothbrush is the first and only toothbrush to properly clean areas where bacteria most often lives. In addition to a bed of thicker bristles for stability and power, the advanced Flossing Bristles™ access the central fossa area of a tooth (the central region with ridges and grooves where 90% of cavities occur) and periodontal pockets (between the gum and tooth) to brush away cavity and gingivitis causing food and plaque build up. This is why your teeth feel like they have been professionally cleaned every time you use your Mouth Watchers toothbrush.
